

Voice with Google Assistant

To use the voice command feature press and release Google Assistant button, and speak into the remote.

As you speak into the microphone the results will appear on the screen. You can use voice commands to complete many of the common tasks.

For example:

- Search for a show: "Bob's burgers."
- Find out what's coming up on TV: "What's on TV tonight?"
- Control video: "Fast forward for 3 minutes."
- Ask about sports: "When are the Canucks playing again?"
- Launch an app: "Launch Netflix."
- Go to the home screen: "Take me home."

Important: The remote must be paired with the IPTV box before it can be used to issue voice commands. Pairing should happen automatically during the setup or when the batteries are inserted into the remote.

Note: If the remote is not paired, please see [how to pair remote](#).

*You can also watch a video tutorial on how to use voice with Google Assistant [here](#).
